AVIATION

Sector Overview

The exponential growth in the airport industry in the region represents great opportunities for the MEP services market. The industry's rising awareness in the fields of energy, environment sustainability, public health, safety and security protocols represents momentous challenges for MEP Contractors. We offer comprehensive contracting service solutions that address these challenges throughout the various levels of the project delivery progression.

Engineering Capabilities

The involvement of our design engineers in the early stages of the project ensures proper service integration and performance sustainability. Our state of the art engineering solutions are designed to ensure sensitivity to the environment and natural resources throughout the project implementation. We proactively manage our processes as to cope with the Airport continuous design reviews and modified security levels and protocols. Value engineering is incorporated as a basic service in every completed design to ensure a quality design philosophy. Our mechanical, electrical and plumbing engineering services adhere to rigid standards and specifications to provide consistently reliable systems and help passengers get where they are going safely.

We Offer

- HVAC layout design and detailing
- Duct workshop / Coordination drawings
- Mechanical / Electrical / Plumbing layout design and detailing
- Piping & plumbing shop / Coordination drawings
- Submittals review
- Design listed systems review
- Material inspection
- Observation review
